

Purpose

This document provides you with key information about this investment product. It is not marketing material. The information is required by law to help you understand the nature, risks, costs, potential gains and losses of this product and to help you compare it with other products.

CFD's are offered by Capital Index (UK) Ltd, ("Capital Index", "we", or "us") a company registered in England and Wales, number 09532185. Capital Index is regulated by the Financial Conduct Authority (FCA) in the United Kingdom, registration number: 709693. Call +44 (0) 207 060 5120 or go to www.capitalindex.com for more information.

This document was last updated on 29th October 2018.

You are about to purchase a product that is not simple and may be difficult to understand

What is this product?

Type

This document relates to products known as "Contracts for Difference" or CFDs. A CFD allows you to obtain an indirect exposure to an underlying asset such as a security, commodity or currency. This means you will never own the underlying asset, but you will make gains or suffer losses as a result of price movements in the underlying asset to which you have indirect exposure.

This document provides key information on CFDs where the underlying investment option that you choose is a Commodity e.g. WTI Crude Oil.

Objectives

The objective of a CFD is to allow an investor to gain leveraged exposure to the movement in the value of the underlying commodity (whether up or down), without actually needing to buy or sell the underlying commodity. The exposure is leveraged since the CFD only requires a small proportion of the notional value of the contract to be put down upfront as initial margin and is one of the key features of trading CFDs. As an example, if GBPUSD is trading at 1.34110 [we use one price for simplicity], and if WTI Crude is trading at 57.130 [we use one price for simplicity], and an investor buys 5 CFDs with an initial margin of 10%, the buy price of 57.130 will mean the initial margin will be USD 2,856.50 or £2,130 $\{P \times (TV/TSZ) \times CS \times TS \times M\}$ $[(\$57.130 \times (0.1/0.001) \times 1 \times 5 \times 10\%)/\text{GBPUSD market rate } 1.34110]$. The effect of leverage, in this case 10:1, means that for each 1 point change in the price of the underlying WTI Crude, the value of the CFD changes by \$5 or £3.73. For instance, if the investor is long and the market increases in value, a \$5 or £3.73 profit will be made for every 1 point increase in that market. However, if the investor is short, a \$5 or £3.73 loss will be incurred for each point the market increases in value.

A future CFD on a commodity has a pre-defined expiry date. There is no recommended holding period and it is down to the discretion of each individual investor to determine the most appropriate holding period based on their own individual trading strategy and objectives.

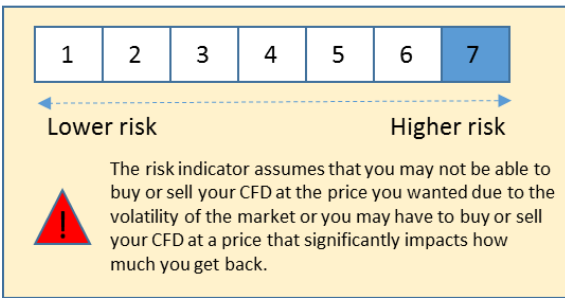

Failure to deposit additional funds in order to meet the margin requirement as a result of negative price movement may result in the CFD being auto-closed. Assuming that only one position is being open at the time on the account, this may occur when equity on the account reaches 50% of minimum margin required for this particular open position. In the case of future CFDs, investors will be given the option to roll their existing contract into the next period – e.g., from a January expiry into a February expiry. Rolling is at the discretion of the investor and any investor who chooses to roll over their commodity CFD position will have an adjustment made on their account equal to the difference between the outgoing and the incoming futures contracts, minus half the spread on the respective CFD. This is done for all clients holding the commodity CFD at the end of the day of expiry and it is done to ensure that that no clients gain or lose out unfairly as a result of the rollover process. Capital Index also retains the ability to unilaterally terminate any CFD contract where it deems that the terms of the contract have been breached.

Intended Retail Investor

CFDs are intended for investors who have knowledge of, or are experienced with, leveraged products. Likely investors will understand how the prices of CFDs are derived, the key concepts of margin and leverage and the fact that although Retail Clients are subject to negative balance protection, they can still lose their entire investment. Indeed, they will understand the risk/reward profile of the product compared to traditional share dealing. Investors will also have appropriate financial means and the ability to bear losses of the entire investment.

What are the risks and what could I get in return?

Risk Indicator

The summary risk indicator is a guide to the level of risk of these products compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified these products as 7 out of 7, which is the highest risk class. This is because there is a very high chance that you could lose all your investment, if you are a Retail client.

CFDs are leveraged products that, due to underlying market movement, can generate losses rapidly. Losses can be up to the entire amount

invested (if you are a Retail Client benefiting from negative balance protection). There is no capital protection against market risk, credit risk or liquidity risk.

Even though Retail Clients are subject to negative balance protection, the total loss you may incur may include the entire amount invested.

Be aware of currency risk. It is possible to buy or sell CFDs in a currency which is different to the base currency of your account. The final return you may get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

Market conditions may mean that your CFD trade is closed at a less favourable price, which could significantly impact how much you get back. We may close your open CFD trade if you do not maintain the minimum margin that is required, if you are in debt to Capital Index, or if you contravene market regulations. This process may be automated.

This product does not include any protection from future market performance so you could lose some or all of your investment if you are a Retail Client. If we are not able to pay what is owed to you, you could lose your entire investment. However, you may benefit from a consumer protection scheme (see the section, "What happens if Capital Index is unable to pay out?").

Performance scenarios

The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance based on evidence from the past on how the value of this investment varies, and are not an exact indicator. What you get will vary depending on how the market performs and how long you hold the CFD. The stress scenario shows what you might get back in extreme market circumstances, and it does not take into account the situation where we are not able to pay you. The following assumptions have been used to create the scenarios in Table 1:

WTI Crude CFD (held intraday)		
Opening Price	P	57.13
Tick Value	TV	0.1
Tick Size	TSZ	0.001
Trade Size (per CFD)	TS	USD 5.00 [£3.73]
Contract Size	CS	1
Margin %	M	10%
Margin Requirement (£)	MR = TN x M	USD 2,856.50 [£2,130]
Notional Value of the trade	TN = CS x TS x P x (TV/TSZ)	USD 28,565 [£21,300.00]

LONG Performance Scenario	Closing price (inc Spread)	Price Change	Profit /Loss	SHORT Performance Scenario	Closing price (inc Spread)	Price Change	Profit /Loss
Favourable	57.987	1.50%	£319.51	Favourable	56.273	-1.50%	£319.51
Moderate	57.416	0.50%	£106.63	Moderate	56.844	-0.50%	£106.63
Unfavourable	56.273	-1.50%	-£319.51	Unfavourable	57.987	1.50%	-£319.51
Stress	54.274	-5%	-£1,064.80	Stress	59.986	5.00%	-£1,064.80

The stress scenario above shows how small price movements can rapidly lead to losses and, in this circumstance will result in a forced close out of your position. In this stress scenario, if you are a Retail Client, you will benefit from negative balance protection and your losses will be limited to your account value.

This does not take into account a situation where we are unable to pay you.

The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance and are not exact indicators. What you get will vary depending on how the market performs and how long you keep the investment.

The figures shown include all the costs of the product itself. The figures do not take into account your personal tax situation, which may also affect how much you get back. This performance scenario assumes you only have one position open, and does not take into account the negative or positive cumulative balance you may have if you have multiple open positions with us.

What happens if Capital Index is unable to pay out?

If Capital Index is unable to meet its financial obligations to you, you may lose the value of your investment. Capital Index segregates all retail client funds from its own money in accordance with the UK FCA's Client Asset rules. Should segregation fail, your investment is covered by the UK's Financial Services Compensation Scheme (FSCS) which covers eligible investments up to £50,000 per person, per firm. See www.fscs.org.uk

What are the costs?

This table shows the different type of cost categories and their meaning.

Cash and Futures	One-off Entry or exit costs	Spread	The difference between the buy price and the sell price is called the spread. This cost is realised each time you open and close a trade.
		Currency Conversion	Any cash, realised profit and losses, adjustments, fees and charges that are denominated in a currency other than the base currency of your account, will be converted to the base currency of your account and a currency conversion fee will be charged to your account
Cash Only	Ongoing costs	Daily holding cost (swaps)	A fee is charged to your account for each night that your position is held. This means the longer you hold a position, the more it costs. The current swaps fee can be referenced within the trading platform in the symbol specification section.
Futures only	Other costs	Rollover costs	We charge you to roll over a future contract into the next month, or quarter, equal to half the applicable spread to open and close a trade.

How long should I hold it and can I take money out early?

CFDs are intended for short term trading, in some cases intraday and they are generally not suitable for long term investments. There is no recommended holding period, no cancellation period and therefore no cancellation fees. **You can open and close a CFD on a bond at any time during market hours.**

How can I complain?

If you wish to make a complaint, you should contact our Client Services Team on +44 20 7060 5120, or email Complaints@capitalindex.com, or in writing to Capital Index (UK) Ltd, King William House, 2A Eastcheap, London, EC3M 1AE. If you do not feel that your complaint has been resolved satisfactorily, you may refer your complaint to the Financial Ombudsman Service (FOS). See www.financial-ombudsman.org.uk for further information.

Other relevant information

If there is a time lag between the time you place your order and the moment it is executed, your order may not be executed at the price you expected.

The Legal Documents section of our website contains important information regarding your account. You should ensure that you are familiar with all the terms and policies that apply to your account. These can be found on our website www.capitalindex.com.

For Retail Clients, a margin close out rule is applied on an account level basis. This means that when the value of the account equity falls below 50% of the initial margin requirement (that was paid to enter into all of the open CFD and/or spread bet

positions at any point in time), one or more CFD and/or spread bet positions will be closed out. We may set a higher percentage than 50%.

Professional clients can lose more than their deposits and they may be required to deposit additional funds to cover their losses.

CFDs and spread bets are complex instruments and come with a high risk of losing money rapidly due to leverage. **80.6% of retail investor accounts lose money when trading CFDs and spread bets with this provider.** You should consider whether you understand how CFDs and spread bets work and whether you can afford to take the high risk of losing your money.
